

I am a new user of XM radio and think it allows the greatest entertainment when driving my car. I don't have to fiddle around while driving to find the stations I want. Couple that fact with important news such as weather and traffic reports and you add safety while travelling! In short I request the FCC allow XM radio to broadcast traffic and weather reports without interference from the NAB. It's about satisfying the needs and desires of satellite radio customers and not the selfish needs of the NAB!!! Please reject NAB petition 04-160. Thank you,
George R. D. Bortle
